RA Worksheet Report

Cybersecurity Assessment of the Industrial Control Systems (ICS)

Cybersecurity Assessment of the Industrial Control Systems (ICS)

Date: 2023-08-14

Business Unit: The Factory

Scenarios

	_	_	1
Description			rk/ani (Geo
Attack on the integrity of order picking systems			
Exploitation of unpatched vulnerabilities in ICS software or firmware leading to system compromise.			
Attack on the integrity of quality control systems			
Physical intrusion into the ICS facility compromising system integrity and potentially disrupting critical processes.			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			
Attack on the integrity of inventory optimization systems			

Attack on the integrity of inventory optimization systems	
Attack on the integrity of inventory optimization systems	
Attack on the integrity of inventory optimization systems	
Attack on the integrity of inventory optimization systems	
Physical intrusion into the ICS facility compromising system integrity and potentially disrupting critical processes.	
Physical intrusion into the ICS facility compromising system integrity and potentially disrupting critical processes.	
Physical intrusion into the ICS facility compromising system integrity and potentially disrupting critical processes.	
Physical intrusion into the ICS facility compromising system integrity and potentially disrupting critical processes.	
Physical intrusion into the ICS facility compromising system integrity and potentially disrupting critical processes.	
Physical intrusion into the ICS facility compromising system integrity and potentially disrupting critical processes.
